Subject: Re: Tech Table review

Dear David,

As a structured cabling system consulting company, Layer One Engineering & Networks recognise the necessity for providing work safe environments for data communications installers on construction sites.

I have seen your Tech Table demonstration a number of times and realise the benefits of the work table both from a safety perspective as well as a productivity improvement device.

The Tech Table enables the installer to follow the installation standards and cabling manufacturing company's termination instructions without compromising safety. The design of the Tech table provides the installer with the ability to terminate both balanced pair cables and connecting hardware as well as perform optical fibre terminations on a stable platform that ensures high quality workmanship in the shortest time possible.

The features of the Tech Table provide the communications consultant with the confidence in the personnel entrusted with the responsibility of installing the communications cabling to meet the intended design expectations of a communications cabling project.

Layer One Engineering & Networks Pty Ltd support and encourage the use this device to promote safety, on-site productivity and high quality workmanship.

Best Regards,

Patrick Attard

Technical Director
